

# Setting Up Server

<https://www.digitalocean.com/community/tutorials/initial-server-setup-with-ubuntu-20-04>

Make name that doesn't suck

Click add domain, type in domain

<https://www.digitalocean.com/community/tutorials/how-to-point-to-digitalocean-nameservers-from-common-domain-registrars>

you also need to add an a entry for "www.yourdomain.ext"

Then add nameservers to namecheap/google domains etc  
Ubuntu 20.04 installation script

<https://www.bookstackapp.com/docs/admin/installation/>

Setting up ssl certificates

<https://www.digitalocean.com/community/tutorials/how-to-secure-apache-with-let-s-encrypt-on-ubuntu-20-04>

<https://nickolas.gupton.xyz/2020/05/21/ubuntu-20.04-bookstack.html>

intalling apache

<https://www.digitalocean.com/community/tutorials/how-to-install-the-apache-web-server-on-ubuntu-20-04>

change permission of /var/www/html to you can copy files with winscp

<https://superuser.com/questions/19318/how-can-i-give-write-access-of-a-folder-to-all-users-in-linux>

^^change permissions the correct way

`sudo chmod a+w /var/www/html`

^^adds permissions for everyone, figure out how to do for one user

<https://www.howtogeek.com/437958/how-to-use-the-chmod-command-on-linux/>
